Mobile solutions

ERP access on the go

Mobile solutions with smartphones or tablets have become the standard as mobility plays an even bigger role in our living and working environments. Apps for iPad, iPhone, Android and other devices have become more than just a trend – they can be a decisive competitive edge for companies. Now you can also have mobile access to your company data using abas!

Intuitive operations and automatic user interface (UI) adjustments to fit any display size. When you switch from using abas on a smartphone to using it on a tablet, content will not only be larger, but the structure and layout are also adjusted to take full advantage of the display area. For smaller displays, for example, product information is presented in layered blocks, while for larger displays the entire width of the device can be used and more information provided at once. If the data are comprehensive and cannot be displayed in a single view, then a product full text search will be automatically completed.

Mobile Sales
The abas Mobile Sales solution allows you to access your customer and prospect data, as well as manage abas sales and CRM processes. Users can search for customers in their current vicinity, connect to mobile Email clients, and access, edit or create quotes, orders, invoices, tasks and notes in abas.

Mobile Service
With Mobile Service, service engineers can access assignment planning through a calendar function. Customer data and service product information, including BOM, service history, service orders, and material planning can be managed. Remote materials management and service reports increase efficiency in the field.

Mobile Purchase
Strategically managing vendor relations requires a great deal of information. The most recent mobile solution allows employees in purchasing to access and edit vendor data using any smart device. Complete procurement management is also supported.

From purchasing to external sales and service forces, mobile solutions by abas provide non-stop support around the world. Test it yourself!
